Project Title : Personal Expense Tracker

2.1. Functional requirements:

[list the main functionalities required]

1. Add, edit, and delete income and expense transactions.
2. Categorise transactions, manage monthly budgets, and filter transaction history.
3. View financial summaries and spending reports through an interactive dashboard.

2.2. Non-functional requirements:

[list the main qualitative features required]

1. User-friendly and easy-to-use interface.
2. Fast and responsive performance.
3. Easy to maintain and update

2.3. List of AI tools used for building UI (if any):

1. Claude

2. ChatGPT

2.4. Prompt (if any):

Sl. No	Name of the tool	prompts
1	ChatGPT	Used to refine the UI design, page layout, features, and prompt engineering.
2	Claude	Build the frontend for a **Personal Expense Tracker** using React (Vite) and plain CSS. The application should allow users to record income and expenses, categorize transactions, set budgets, and view reports. Create responsive pages: Landing, Login, Register, Dashboard, Transactions, Categories, Budgets, Reports, Profile, Settings, and 404. Use reusable React components, dummy data, modern UI, and no backend, APIs, or database.

2.5. List of files:

Financial Reports
Everything you need to manage money
Simple tools. Powerful insights. Zero complexity.
Track Spending
Monitor every rupee across all categories in real time.
Visual Reports
Beautiful charts that make your finances easy to understand.
Budget Control
Set monthly budgets and get alerts before you overspend.
Smart Alerts
Stay on top of bills and budget limits with timely reminders.
Secure & Private
Your financial data stays yours — always encrypted.
Works Everywhere
Responsive on desktop, tablet, and mobile devices.
